

PERSONNEL PROTECTION

Record- Map - Relay - Respond

GPS Enabled Devices

GPS coordinates sent are sent to the PPS for translation by PlacePoint and then delivery to PC's and/or mobile phones

PlacePoint is an optional plug-in for the PPS which provides GEO Data translation for devices which can send GPS position information within a SMS text message.

PlacePoint provides links to your preferred mapping system with the translated GPS coordinates embedded within it. This enables users to use most of mapping systems available on the internet.

Any device that can send GPS coordinates via SMS can use PlacePoint to display the devices position anywhere in the world.

- Use any GPS enable GSM or Satellite device with PlacePoint.
- Supports configuration multiple data templates to handle all formats of GEO Data
- Each GPS Device can have their own team of recipients who will receive links to mapping services.
- Send alerts to different teams based on SMS GEO Data content.
- Default support for up to 100 devices. Expandable on request.
- Easy to use administration interface.
- Send up to 3 different mapping links per device to PC screens and up to 3 different mapping links per device to mobile phones.
- Internet connection only required if you are using an Internet mapping service.
- Using the PPS you can send position request to track enabled devices and display it's position information on PC screens and mobile phones.
- All data received or transmitted is recorded for later retrieval.

Personnel Protect System is the most effective 24/7 Mobile Panic Alarm Monitoring Station in the World.
